# Chapter 02: Deploying Your First Web Application

The screenshot displays the AWS services console interface. At the top, there is a search bar labeled "AWS services" with the placeholder text "Find a service by name or feature (for example, EC2, S3 or VM, storage)". Below the search bar, there are two expandable sections: "Recently visited services" (currently expanded) and "All services" (collapsed). The "All services" section is organized into a grid of categories, each with an icon and a list of services:

- Compute**: EC2, EC2 Container Service, Lightsail, Elastic Beanstalk, Lambda, Batch
- Storage**: S3, EFS, Glacier, Storage Gateway
- Database**: RDS, DynamoDB, ElastiCache, Redshift
- Networking & Content Delivery**: VPC, CloudFront, Direct Connect, Route 53
- Migration**: Application Discovery Service, DMS, Server Migration, Snowball
- Developer Tools**: CodeStar, CodeCommit, CodeBuild, CodeDeploy, CodePipeline, X-Ray
- Management Tools**: CloudWatch, CloudFormation, CloudTrail, Config, OpsWorks, Service Catalog, Trusted Advisor, Managed Services
- Security, Identity & Compliance**: IAM, Inspector, Certificate Manager, Directory Service, WAF & Shield, Artifact
- Analytics**: Athena, EMR, CloudSearch, Elasticsearch Service, Kinesis, Data Pipeline, QuickSight
- Internet of Things**: AWS IoT, AWS Greengrass
- Contact Center**: Amazon Connect
- Game Development**: Amazon GameLift
- Mobile Services**: Mobile Hub, Cognito, Device Farm, Mobile Analytics, Pinpoint
- Application Services**: Step Functions, SWF, API Gateway, Elastic Transcoder
- Messaging**: Simple Queue Service, Simple Notification Service, SES
- Business Productivity**: WorkDocs, WorkMail, Amazon Chime

# Chapter 03: Treating Your Infrastructure As Code

The screenshot displays the AWS CloudFormation Designer interface. The top navigation bar includes the AWS logo, 'Services', and various service icons (EC2, RDS, SES, S3). The user is logged in as 'Nathaniel Felsen' in the 'N. Virginia' region. The main workspace shows a CloudFormation template with two resources: 'HelloWor... SecurityGroup' (represented by a red padlock icon) and 'HelloWorld Instance' (represented by an orange square icon). An arrow points from the 'HelloWorld Instance' to the 'HelloWor... SecurityGroup', indicating a dependency. The bottom panel shows the 'Metadata' tab for the 'HelloWorld Instance' resource, displaying the following JSON code:

```
1 - {
2 -   "Resources": {
3 -     "HelloWorld": {
4 -       "Type": "AWS::EC2::Instance",
5 -       "Metadata": {
6 -         "AWS::CloudFormation::Designer": {
7 -           "id": "16-1553-0216-016-UG900-51"
```

The footer of the console includes 'Feedback', 'English', '© 2008 - 2016, Amazon Web Services, Inc. or its affiliates. All rights reserved.', 'Privacy Policy', and 'Terms of Use'.

```
49     },
50     "EC2IPT00": {
51       "Type": "AWS::EC2::Instance",
52       "Properties": {},
53     },
54     "Metadata": {
55       "AWS::CloudFormation::Affinity": "AvailabilityZone",
56       "id": "8a2f1c1c-1c1c-1c1c-1c1c-1c1c1c1c1c1c": {
57         "BlockDeviceMappings": [
58           {
59             "EbsOptimized": true,
60             "HostId": "i-12345678",
61             "IamInstanceProfile": "arn:aws:iam::123456789012:instance-profile/EC2-Instance-Profile",
62             "ImageId": "ami-12345678"
63           }
64         ]
65       }
66     }
67   }
68 }
```

### Template Information

Select the AWS region to introspect. The description is optional but will be displayed in the AWS Management console when the template is used to create a stack. You can optionally enter a filter for the resources. If you specify a filter, all resources with a name or a tag value that contains the filter text will be selected automatically. Note that the filter is a case-insensitive match.

Management / Kibana  
 Index Patterns Saved Objects Advanced Settings

**kibana**

Discover  
 Visualize  
 Dashboard  
 Timeline  
 Dev Tools  
 Management

**Warning** No default index pattern. You must select or create one to continue.

## Configure an index pattern

In order to use Kibana you must configure at least one index pattern. Index patterns are used to identify the Elasticsearch index to run search and analytics against. They are also used to configure fields.

**Index name or pattern**  
 Patterns allow you to define dynamic index names using \* as a wildcard. Example: logstash-\*

logs-\*

**Index contains time-based events**

**Time-field name** refresh fields

timestamp  
 meta.error.time

By default, searches against any time-based index pattern that contains a wildcard will automatically be expanded to query only the indices that contain data within the currently selected time range.

Searching against the index pattern logstash-\* will actually query elasticsearch for the specific matching indices (e.g. logstash-2015.12.21) that fall within the current time range.

**Use event times to create index names (DEPRECATED)**

Metrics

## Step 1: Create rule

Create rules to invoke Targets based on Events happening in your AWS environment.

### Event Source

Build or customize an Event Pattern or set a Schedule to invoke Targets.

Event Pattern ⓘ   
  Schedule ⓘ

**Build event pattern to match events by service**

Service Name:

Event Type:

Any state   
  Specific state(s)

Any instance

**AWS Identity and Access Management (N. Virginia) Service Status** APP 2:20 PM

**Informational message: Increased Error Rates and Latencies**

We are investigating increased error rates and latencies on IAM administrative APIs in US-EAST-1 Region. The IAM console and Create, Delete, List, Get, and Update API actions on IAM Users, Groups, Roles and Policies may be impacted. Other AWS services whose features require these actions will also be impacted. All existing authentications and authorizations are not impacted.

**AWS Identity and Access Management (N. Virginia) Service Status** APP 3:20 PM

**Service is operating normally: Increased Error Rates and Latencies**

Between 1:01 PM and 2:48 PM PDT we experienced increased errors and latencies within the IAM console and Create, Delete, List, Get, and Update APIs. Other AWS services whose features require these actions were also impacted. The issue has been resolved and the service is now operating normally.

# Chapter 08: Hardening the Security of Your AWS Environment

## Security Checks

- ▶

**Security Groups - Specific Ports Unrestricted**

Checks security groups for rules that allow unrestricted access (0.0.0.0/0) to specific ports.

22 of 57 security group rules allow unrestricted access to a specific port.

Refreshed: 8 hours ago
- ▶

**IAM Use**

Checks for your use of AWS Identity and Access Management (IAM).

At least one IAM user has been created for this account.

Refreshed: 8 hours ago
- ▶

**MFA on Root Account**

Checks the root account and warns if multi-factor authentication (MFA) is not enabled.

MFA is enabled on the root account.

Refreshed: 8 hours ago

### Upgrade your Support plan to unlock all Trusted Advisor recommendations!

You will have access to technical support from a cloud support engineer, with phone and chat support, support API, Identity and Access Management, Architecture support - use case guidance, and more.
